

Name - Karon Mishra Div - D158  
Roll No - 36 Lanteen App.

## NPL Topic Description for

### Problem Statement

College, office canteens are rarely ever empty. They are mostly crowded due to a lot of people trying to order food and the ordered food being prepared to or being not available. Existing apps only allow to see the menu of hostel mess or office canteens. A app to preorder food is becoming a necessity.

### Description:

Lanteen App allows the users to preorder food and reduce waiting time and queues in canteens. If a wallet system is introduced it also provides safety against scams like showing screenshots of previous payments and continuously getting free food. The app can also allow access to data regarding what food items are consumed to prevent further food wastage and helping in preplanning menus.

### Features

1. Preorder Food Service  
Allow users to preplace orders for food.

2.) Food wastage prevention  
Through data access to the menu planners can know what food items are popular and what remain even in the end of day.

3.) Scam prevention  
Scams like showing previous payment screenshots can be eliminated using dummy wallet.

Conclusion:-

Efficient solution in canteen app.  
~~Also~~ Better than other apps in terms of allowing preplanning order feature, scam preventions, etc.
